VISION

- To continuously improve quality of products.
- To keep on increasing the productivity and introducing new products.
- To utilize best practices in processes and technologies.

MISSION

To accomplish our vision through decency, innovation, worldwide span, ethical values & business morals.

QUALITY POLICY

We are committed to total customer satisfaction which shall be achieved by providing cost effective quality products with timely delivery.

ENVIRONMENTAL POLICY

- Meet applicable requirements related to environmental aspects on an ongoing basis with an aim to improve environment.
- Strive for prevention of pollution through continual improvement of process, technology and equipment, wherever applicable.
- Set and review environmental objectives and targets.
- Promote conservation of resources.

HEALTH & SAFETY POLICY _

- Ensure healthy and safe working environment of employees through continuous monitoring and controlling workplace hazards by adopting appropriate technology and best management practices.
- Strive for continual improvement in Occupational Health & Safety (OH&S) performance by enhancing awareness, skill and competence of employees and contractors so as to enable them to demonstrate their involvement, responsibility and accountability towards the same.
- Comply with applicable OH&S and other requirements on an ongoing basis.
- Set and review OH&S objective and targets.
- The OH&S Policy will be reviewed for continuing suitability.

RADHEY SHYAM AGARWAL CHAIRMAN

NIRMAL AGARWAL DIRECTOR

Incorporated in 1988, Vishal Pipes Ltd. is leading manufacturer of Steel Pipes & Tubes, Steel Poles, Steel Structure (medium to heavy fabrication) and Polymer pipes - UPVC, CPVC, HDPE & MDPE Pipes. Within India, we have a strong presence and have expanded globally too.

Headquartered in New Delhi, with an integrated manufacturing units spread over 2,20,000 square meters at Sikandrabad in Greater Noida (Part-II) in state of Uttar Pradesh. The units are certified for ISO 9001, ISO 14001, ISO 18001 & CE; equipped with state-of-art plant & machinery, quality control lab & equipment, PLC controlled CNC machines, galvanization baths, powder coating, surface preparation & painting facilities.

Behold the world around you. Except for Mother Nature, virtually all thing be it buildings, skyscrapers, automobiles, bridges, railways to metro, flyovers, energy, irrigation, gas distribution, pipeline infrastructure, power distribution, rural electrification and more, have use of pipes, tubes & steel sections in them. No wonder they are the soul of any constructions and industrial infrastructure! Think about aforesaid sectors; think of VISHAL PIPES LTD. where products (Brand `VPL India`) are epitomes of excellence in quality, corroborated by National & International Standards.

We believe in pioneering changes to cater to an ever-evolving economy by infusing superior cutting edge technology and innovation. The company has multiplied its growth by introducing new products, improving quality and increasing productivity bench marking the entire product line and eventually gaining the mind space of a large number of customers. Adherence to high quality and timely delivery are our USPs.

We give proper attention to ethical issues like promoting conduct based on integrity, accommodating diversity, empathetic decision-making, compliance and governance consistent with company's core values.

We, thank our valuable clients, vendors and other stake holders for their ardent support.

Assuring of our best services at all times.

Best Regards, Radhey Shyam Agarwal Chairman

STEEL STRUCTURE & POLES _____

HEAVY STEEL FABRICATION

SPECIFICATION	
RDSO	Composite Steel Plate Bridge
RDSO	Open Web Bridge
RDSO	Bow String Bridge
Railway	Steel Channel Sleepers

STEEL STRUCTURE

SPECIFICATION			
RDS0 Specn	Structure for Overhead Railway Electrification		
Customised	Metal Beam Crash Barrier for Highways		
Customised	Solar Module Mounting Structure		
Customised	Pipe & Lattice Structure for Power Sub-stations		
Customised	Telecom Towers (GBT, RTT, RTP)		
Customised	Pre-engineered Buildings (PEBs)		
Customised	Pre-fabricated Items for Rural Electrification		
Customised	Support Structure for Power Plants		
IS: 15500	Handpump for Water Wells		

STEEL POLES

SPECIFICATION	
IS: 2713	Swaged tubular pole for Overhead powerlines
Customised	Street Lighting
Customised	Pole for Aerial OFC.

NOTES:

We can also fabricate steel structure AS PER CLIENTS DESIGN AND DRAWINGS.

We can supply aforesaid structure in **BLACK, GALVANIZED, METALIZED & PAINTED FORM.**

We also undertake **ERECTION** of metal beam crash barrier, PEBs & bridges.

POLYOLEFIN PIPES & FITTINGS _____

HDPE PIPE & FITTINGS

SPECIFICATION	
IS : 4984	Potable Water Supply
IS : 14333	Sewerage
IS: 14151	Sprinkler Irrigation System

APPROVALS

Our relentless pursuit and quest for success is unmatched. Many Such international accreditations and certifications have been awarded to Vishal Pipes Ltd. from governing bodies for meeting quality standards.

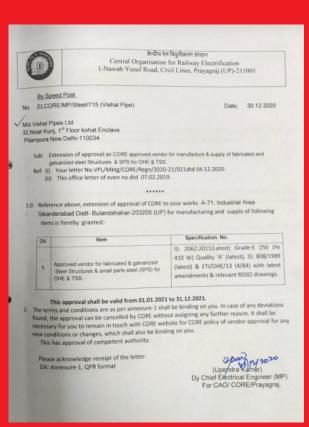

PGCIL Approval - HDPE Pipes

Core Approval - GI Tubes for OHE

It must be ensured that "Quarterly Performance Report (QPR)" in the enclosed format is submitted to this office, duly countersigned by the inspecting official of Min RITES/Consignee (in case of consignee inspection only), regularly without fail for the supplies made during the period of approval and a declaration that the supply osefion shown in the QPR is exclusive list of supply of material duly inspected by RITES/Consignee and no other material got tested/inspected by RITES/Consignee As supplied to the Railways including OHE & TSS contractors and no failure reported from any Zonal Railway during the period of approval underneath the "QPR tself. In case of "Nif supply and non participation in any tender during the period of approval, this office should be appraised of the reasons thereof.

PGCIL Approval - Street Lighting Poles

Core Approval - OHE Steel Structures

POWER GRID CORPORATION OF INDIA LIMITED

(A Constrained of India Enterprise)

Ref: C/QA&I/MQP/Extn/VPL

Date: 12.05.2020.

Subject: Extension of Approval of M/s Vishal Pipes Ltd., Sikandrabad for supply of ERW Pipes and MQP for Pipe Type Sub-station structure for POWERGRID projects.

Ref: Your email dated 03.05.2020

Dear Sir.

In reference to the aforementioned email, we hereby extend the validity of vendor approval of Vishal Pipes Ltd., Sikandrabad addressed as above for supply of ERW Pipes, as follows, up to 30.04.2023:

50 Nb to 200 Nb as per IS 1161 (Vst 210, 240)
 15 Nb to 150 Nb as per IS 1239

The Manufacturing Quality Plan (MQF no. SPV 311, Rev 01), for Galvanized Pipe type Sub-station structure for POWERGRID Projects is also hereby extended 68 30,04,2023.

Please ensure that material shall meet the requirements of POWERGRID technical specifications, MOP, approved drawing/data sheet of the specific contract and raw material is procured from POWERGRID approved sources. If, at any point of time, any absormality is noticed in this regard, we reserve the right to withfraw this approval with immediate effects.

Yours faithfully.

Northern Railway - Pipes & Structure

HEAVY STEEL FABRICATION

The structures are fabricated by using superior quality material and latest techniques to ensure that fabrication done by us is as per customer requirement. Fabrication process is carried out in accordance with the prescribed quality guidelines and norms. Our experts maintain regular communication with the customers and ensure that their needs are comprehended in an efficient manner. Besides, we ensure completion of projects within the minimum possible time-period.

HEAVY STEEL FABRICATION

COMPOSITE STEEL PLATE GIRDERS

These girders are used in ROBs and railway bridges. After completion of fabrication process these girders are shot blasted, shear connector studs and metalized / painted are efficiently welded on the top of flange.

Sizes:

- Flange 140mm to 1200mm, thickness 6mm to 80mm
- Web 180mm to 3000mm, thickness 6mm to 60mm
- Length 20 mtrs. (Customised sizes are also fabricated as per client specification.)

FEATURES

- Good capacity to carry load in shear, tension and compression
- Members are visible and thinner, factory made, which helps us to predict the girder's behavior in reasonable manner
- These girders can be replaced easily
- Conveniently amenable to repairs and splicing
- These girders can efficiently carry heavy loads over longer time span with the minimum possible dead weight, leading towards smaller foundation
- As far as urban environment is concerned the limited space of working and traffic congestion is common, steel bridges are the best option which is constructed easily with less disturbances to the people and community.

HEAVY STEEL FABRICATION _____

OPEN WEB GIRDERS

Open web girders are used for track bridges over large rivers and valleys. Standard length of open web girders in railways are 30.5, 45.7, 61.0 and 76.2 meters. Depending on width requirements single and multiple cell girders are selected.

FEATURES

- High torsional stiffness and strength this enables the use of box girders in horizontally curved bridges and interchanges.
- Greater aerodynamic stability.
- Reduced susceptibility to lateral buckling of flanges in lateral-torsional and distortional buckling modes.
- Support point required are less compared to conventional systems.
- Improved durability.
- Reduced maintenance of protective coatings since the exposed surface is less and fewer edges are there and avoidance of exposed horizontal surfaces, no exposed bracing and stiffeners.
- Clean lines of a closed box girder provide better appearance for footbridges where the visual impact counts.

HEAVY STEEL FABRICATION

BOWSTRING GIRDER

Bowstring bridge is an arch bridge in which the outward-directed horizontal forces of the arch are borne as tension by a chord tying the arch ends, rather than by the ground or the bridge foundations. This strengthened chord may be the deck structure itself or consist of separate, deck-independent tierods.

- Much like a through-truss bridge, except that the truss can be a higher, deeper segmental curve.
- Suitable for 50m 150m spans.
- Attractive.
- Can be constructed on less robust foundations e.g. atop elevated piers/areas of uneven soil.
- Can be pre-fabricated offsite and hauled or lifted into place.

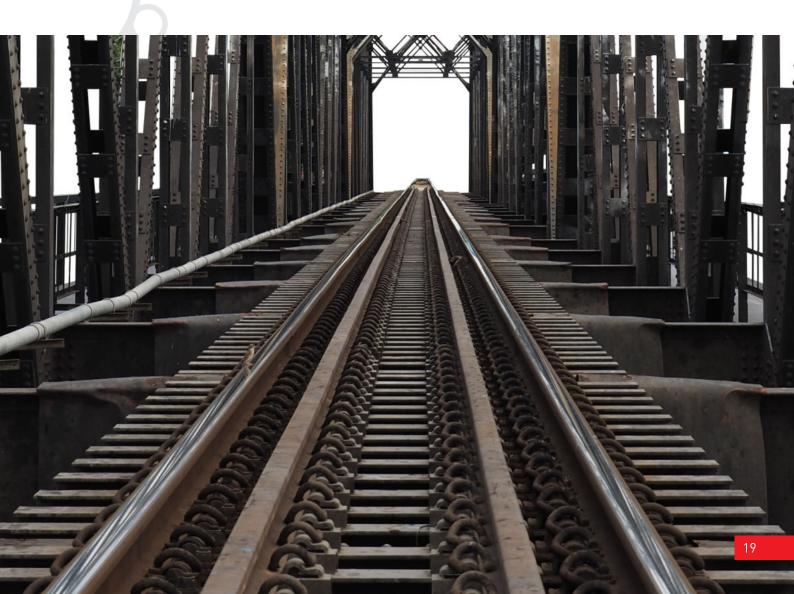

HEAVY STEEL FABRICATION

STEEL CHANNEL SLEEPERS

We fabricate mild steel channel sleeper which are used on tracks which are passed through bridges over rivers. These are light in weight and more accurate in dimensions as compare to wooden or concrete sleepers.

Steel sleepers have enormous advantages including lower cost and durability and sustain ability compared to wooden sleepers make them an effective technical solution for modern rail network in their state of the art and most modern in house galvanizing facility of steel channel sleepers.

STEEL STRUCTURE

RAILWAY OHE STRUCTURES

We are CORE approved vendor to manufacture and supply following structure for railway overhead electrification.

- Rolled Mast
- B-series Mast
- Special Fabricated Masts
- Portals
- Two Track Cantilever (TTC)
- Traction Sub-station
- Small Part Steel (SPS)

These structures are manuactured and galvanised as per RDSO specifications.

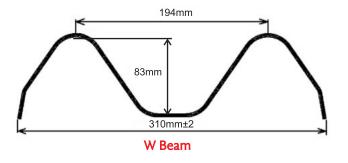

METAL BEAM CRASH BARRIER

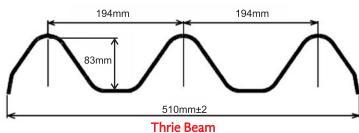

Vishal Pipes Ltd. is a leading manufacturer and supplier of metal beam crash barrier systems. Our range of road and highway safety barriers include the various types of W-Beam and Thrie-Beam systems.

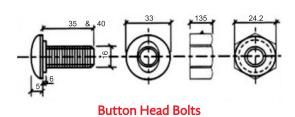

These crash barriers are manufactured by using superior class raw materials and the latest technology in order to ensure the finest quality products. We continue to service our customers through our ongoing program of research and development.

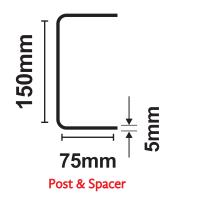

Guard rail or Metal Crash Barriers are very effective road safety systems which help in protecting vehicles and the passengers in case of an accident and also serve as a good visual guide for drivers, especially in the night. Vishal Pipes Limited supplies the best Guard rails which are strong, sturdy and aesthetic.

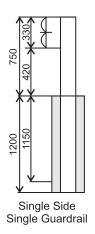

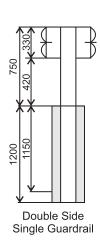

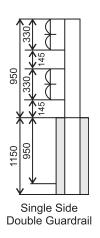

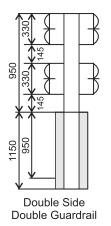

SECTION	LENGTH (MM)	SIZE (MM)	THICKNESS (MM)
W Beam	4318	310	2.67-3.5
Thire Beam	4318	510	2.67-3.5

Spacer	330-530	150x75	5

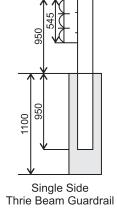

CRASH BARRIERS GRAPH

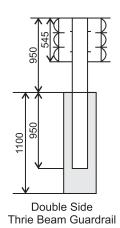

SOLAR MODULE MOUNTING STRUCTURE

One of the prime drivers in the asset valuation of a solar power plant is the Module Mounting Structures (MMS) which is a key ingredient in the successful running of a solar power plant.

We manufacture solar PV module mounting structures (MMS) for land based solar power plants. The structure is manufactured using superior quality materials and parts. Our solar MMS combine optimum dimensioning, short mounting times, economic efficiency and maximum durability to ensure optimal returns on investments for all kinds of PV installations. Our Solar MMS design can be customized to fit all types of PV modules and can be optimized for varied soil types - from sandy deserts to hard rocky terrain.

MMS are supplied in vast spectrum of sectional dimensions and thickness (0.60 mm to 7.00 mm).

We manufacture and supply MMS in Hot Dip Galvanized (HDG), Pre-Galvanized and Galvalume.

We manufacture and supply Torque Tubes for smart solar trackers.

POWER SUB STATION STRUCTURES

These structures includes Gantries and Equipment Support Structures. Gantry structures are mainly used for guiding the power conductor from last tower near substation to the electrical equipments in a substation. This structure consist of a number of columns and Girder beams, which depend on number of circuits of the line. Gantries are also used for line crossing.

Power conductors of one line can be underpassed with the help of required number of gantries. Equipment Support Structures are columns, supporting electric equipments in a substation.

We offer wide range Substation Structures for all types and varieties of Power Sub Station up to 765 KV.

We have full in-house Fabrication and Hot Dip Galvanizing Facilities that assist in the quality production of the Power Distribution Structures.

TELECOM TOWERS

ROOF TOP TOWERS (RTT)

Roof Top Towers are installed on the roof of building in urban and semi-urban areas, where enough space is not available for GBT. These low height towers (12 to 24 meter) helps to cover the maximum network coverage in the nearby areas. RTTs are required for smooth data network for urban/semi-urban areas.

Features:

- These are installed on roof of building to get the maximum AGL with minimum space.
- Cost effective in comparsion to GBT

ROOF TOP POLES (RTP)

Roof Top Poles are installed on high rise buildings to cover the Network Coverage in the highly populated areas. These are available from 6 to 12 meters height. RTPs are required for Speedy and Smooth Network Coverage in the Dense/High populated areas.

Features:

- Requires very less space (approx 200 sq.ft.)
- Light weight and easy to install
- Cost Effective

GROUND BASED TOWER (GBT)

For covering long distance areas and providing services in Rural and semi-urban areas Ground Based Towers are the preferred telecom solution. There are three types of Ground Based Towers – Angular, Tubular and Hybrid Towers. We install the same for Telecom Network Providers according to the requirement.

Features:

- These are available from 30 to 60 meters height which helps to cover larger area from network perspective.
- These towers are built of heavy steel structure, hence there is no constrain for equipments loading.

PRE - ENGINEERED BUILDING

We are manufacturer and supplier of Pre Engineered Buildings.

We design these as per the specification of the client.

These services provided by us are to be fabricated using best suited inventory of raw materials available from all sources and manufacturing methods that can efficiently satisfy a wide range of structural and aesthetic design requirements.

We offer turnkey solution for PEB under one structure, beginning with designing, fabrication, production and till installation. The offered structures are high in demand due to its energy efficiency and superior load bearing strength. We are developing these structures for creating factory sheds, warehouse, dairy farm sheds and low rise industrial buildings.

They are high in quality and meet the client's requirement in every term of quality. They are sturdy in construction, require less maintenance and give the constant performance to the user with any problem. Our offered product is well known for attributes like weather resistance and easy installation.

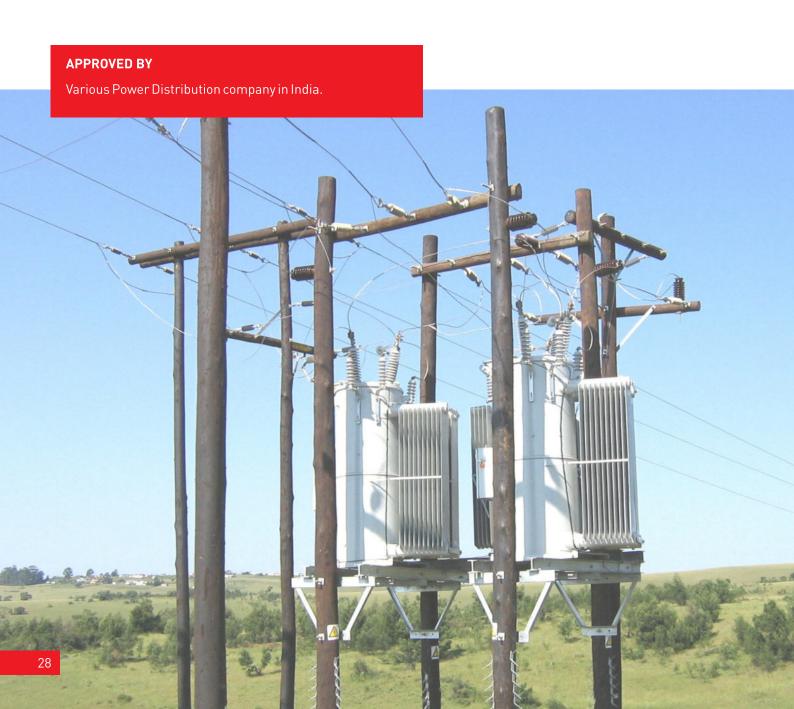

RURAL ELECTRIFICATION STRUCTURE

One of the key challenges of the electricity sector is development of rural electrification. This has been a problem not only in India but also across the globe. Even today, a big chunk of population in rural areas of developing and under developed countries do not have access to commercial forms of energy like electricity and are still dependent on the use of traditional fuels for power.

Rural electrification is the process of bringing electrical power to rural and remote areas. Rural communities are suffering from colossal market failures as the national grids fall short of their demand for electricity.

The power generation sector has faced tremendous challenges till now especially with rural electrification. But with the governments increasing focus on rural electrification to establish the route of sustainable growth presents with a business opportunity in providing steel structures for Rural Electrification. We at Vishal Pipes Ltd. are leading manufacturer & supplier of pre-fabricated galvanized items required in rural electrification in India. Our quality has been appreciated through out the county and have received repeated orders too.

STRUCTURE FOR POWER PLANTS

We offer support structures for power plants, like handrails, pipe bracing and other secondary structures.

HAND RAILS

We offer customized, fabricated & cost effective handrails system that are widely used to guard platforms, stairways, towers, danger zones and other areas where safety is a prime concern. These handrails are heavy duty type with better load carrying capacity, and specially recommended for highly corrosive weather conditions.

SECONDARY STRUCTURE

We offer customized secondary structure for power plant. These structures are made of steel tubes, angle, channel, beams & other steel components. These are supplied after proper surface preparation as per NACE guidelines and painted too.

DEEPWELL WATER HANDPUMPS

INDIA MARK-II DEEP WELL HAND PUMP

FEATURES

- India Mark II Deep Well Hand pump / hand well pump as per Bureau of Indian Standard Specifications with 63.5mm dia cast iron brass sleeved cylinder assembly.
- The above-ground mechanism is fabricated from welded steel plates and sections for strength, and hot-dip galvanized for corrosion resistance.
- A chain and quadrant mechanism of the pump handle provides easy and accurate alignment of the connecting rod.
- The handle bar (32±1) mm has a high mechanical advantage and is designed to counter balance the weight of the connecting rods to reduce the pumping effort required by the user.
- Sealed ball bearings for the handle on a stainless steel axle adds to the ease of operation and lower maintenance needs.

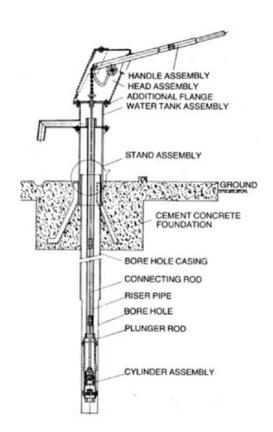

STROKE LENGTH & DISCHARGE OF PUMPS

Hand Pump Type	Stroke Length	Discharge Minimum in liters (40 Strokes/Minute)
Standard	125±4	15

- The water tank assembly has an appropriate coupler to suit 32 mm NB medium class galvanized iron (Gl) riser pipes or uPVC pipes.
- Riser pipes are comprised of locally available standard 32 mm NB Gl pipes. Other options such as upvc, HDPE & FGP are also available.
- Connecting rods are of bright steel bar with threaded and couplers and are electro-galvanized against corrosion. Alternatively stainless steel rods are also available for better performance.
- The cylinder is made from a cast iron with brass liner and gun metal Plunger Valve and check valve components. All nitrile rubber parts like Pump Bucket, Sealing Ring, Upper Valve Seating & Lower Valve seating are made from high quality Nitrile Rubber.

SPECIFICATION:

Minimum Bore Size	100 mm.
Internal dia. of Cylinder	63.5 mm
Stroke length	125±4 mm
Operating depth (approx.)	up to 45 meters

DEEPWELL WATER HANDPUMPS

EXTRA DEEPWELL HAND PUMP

Extra Deep Well Hand Pumps discharges 12 litres (minimum) per minute per 40 strokes with an average installation range of the cylinders varying between 45 m to 90 m below ground level. These pumps are available with Normal Stand & telescopic stand.

Using finest quality steel and integrated with advanced working mechanism. These pumps offer optimum water discharge and are suitable for preventive maintenance with simple tools. These products are highly reliable and durable.

The Extra Deep Well Pumps set consists of the followings:

- Optional Telescopic Stand Assembly
- Pump Head
- Connecting Rod, Mild Steel Electro Galvanized (20 nos.)
- Option-Connecting Rod SS (20 Nos.)
- Cylinder assembly
- Riser Pipe 32 mm (1 1/4" NB with socket (20 Nos.)
- Set of Hex Bolts and Nuts
- Heavier sq. section (40mm) handle Assy. fixed with bearings (2 Nos.), T-Bar and (3 nos. of triangular counter weights if required)
- Chain with coupling
- Third plate (intermediate flange)
- Water Tank Assembly with 32mm (1-1/4") R.P. Holder
- Normal Stand Assembly

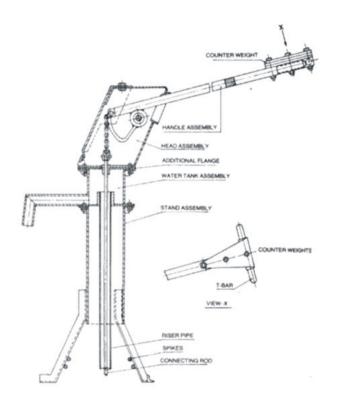

STROKE LENGTH & DISCHARGE OF PUMPS

Hand Pump Type	Stroke Length	Discharge Minimum in liters (40 Strokes/Minute)
Extra Deep	100±4	12

SPECIFICATION:

Minimum Bore Size	100 mm.
Internal dia. of Cylinder	63.5 mm
Stroke length	100±4 mm
Up to 60 meter	up to 45 meters
61 meter to 70 meter	One Weight
71 meter to 80 meter	Two Weight
81 meter to 90 meter	Three Weight

DEEPWELL WATER HANDPUMPS

AFRIDEV HAND PUMP: DESIGNED FOR AFRICA

The Afridev Pump was designed on the basis of field trials in Africa.

The Afridev hand pump is a pump which can pump water from up to 45-60 meters below ground surface. This pump is designed with a cylinder which allows the piston to be extracted without removing the rising main.

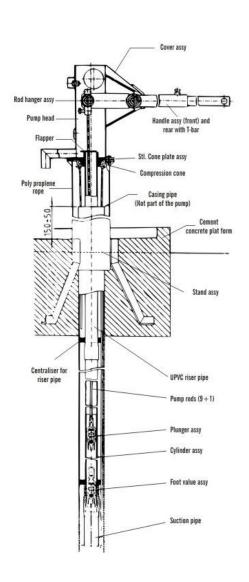

All the specifications of the Pump are controlled by SKAT and the specifications have undergone 5 Revisions.

It is widely used in almost all the regions of Africa and is one of the biggest success stories of the continent.

THIS PUMP IS VERY POPULAR IN MOST PARTS OF AFRICA. THE SALIENT FEATURES OF THIS PUMP ARE:

- Static water lever 20 mtr to 450 mtr
- Cylinder Assembly it is made of UPVC pipe with brass liner inside and plunger valve and foot valve either brass or nylon (Derlin)
- Riser pipe UPVC (OD 63 mm x thickness 4.7 mm)
- Casing Pipe 100 mm to 200 mm it can also used in Dug Wells
- Pump Rod it is either Threaded or Eye Hook type made of SS or MS
- Bearing bushes are made from especially high quality plastics
- Pump is hot dip galvanized, use high quality zinc.
- Variable handle settings are possible to meet changes in water levels at different times.
- Customization of spout length and Pedestal is possible.
- Choice of Eye & hook connecting rod or threaded connecting rod.
- Discharge 16.5 ltr per minute in 40 stroke
- Stroke length 225 ± 6 mm with an installation depth range between 15 m to 45 m.
- Easy to install can be accomplished by village women mechanics.
- Alternative stainless steel lined cylinder available for aggressive water conditions.
- Quick release Eye & Hook tool-less ends on Connecting Rods with rubber Centralizers facilitate maintenance and protect the riser pipe against internal wear.
- Connecting rods are available in Mild Steel as well as Stainless Steel.
- Special tools for installation & maintenance of Afridev is available.
- Installation Manual is also provided with each pump.

DEEPWELL WATER HANDPUMPS

DEEP WELL HAND PUMP AS PER IS 15500

Borewell and Range of Static Water Level, Stroke Length & Discharge of Pumps.

S. No.	Hand Pump Type	Bore Well / Casing (N.B, Min) in (MM)	Static Water Level (Range in Meters)	Stroke Length	Discharge Minimum in (40 Strokes/Min.)
1	Standard	100	100	100	15
2	VLOM - 65	125	125	125	15
3	VLOM - 65	100	100	100	10
4	Extra Deep	100	100	100	12

- Easy to Install
- Resistant to Corrosion
- Used High Quality Nitrile Rubber, Leaded Tin Bronze & Brass Liner
- Superior Water Discharging Capacity
- Longer Working Life
- Minimum Maintenance Costs

STEEL POLES

STEEL POLES

We manufacture entire range of swaged poles confirming to IS: 2713. We have all required testing facilities and machineries like hydraulic swaging machines, strengthening and welding machines and has facilities to produce poles upto 16 meter and thickness up to 12 mm. The swaged poles are manufactured completely in-house starting from manufacturing of steel pipes, swaging unit, painting & galvanizing.

FEATURES

- Fireproof, immune to insect infestations and no pole rot
- Weighs 40 to 50 % less than comparable concrete structures
- Elongation upto 75 % with no shrinkage
- Free of copper wire grounding
- Capable of galvanizing all sizes of poles

APPROVED BY

- Power Grid Corporation of India
- U.P. power corporation ltd.
- J&K power development DEPT
- Rural Electric Corporation Ltd.
- Uttrakhand Power Corporation Ltd.

& various other power distribution companies

STREET LIGHT POLES

Street Light poles can be of multiple types such as octagonal, tubular, conical in shape. We can manufacture / customize street light poles as per as per the customers specifications and drawings.

POLE FOR AERIAL OFC

VPL India poles comes with strength and stability to withstand torsional stress offering minimum wind resistance and perfect elasticity to take all kinds of shocks, cyclones, thrust line breakages, etc. Aerial OFC steel poles are designed and customized to meet the versatile demands of architects, engineers, planners and more for power distribution, illumination, signage and other diverse needs.

The standard poles for aerial cable installations are galvanized steel poles of the sizes 7 & 8 meters. The Steel poles are tabular in design and shall be swaged.

- Wind load: Due to the curvature of the surface, the wind load is only about 60% of the total flat surface.
- Strength: The uniform distribution of metal in the cross section of the tubular poles provides the same strength in each direction.
- Corrosion resistance: Due to its smooth surface, the tubular poles have minimum risk of corrosion.
- Installation: The pipes are easy to install and easy to handle, thanks to their light weight.

POLYOLEFIN PIPES & FITTINGS

HDPE PIPES FOR POTABLE WATER SUPPLY

CONFORMING TO IS 4984

These pipes are manufactured using superior quality raw material with the help of state-of-the-art manufacturing facilities. HDPE pipes are designed to cater application requirements of water supply, irrigation, bore-wells, drainage, infrastructure projects and industries. These pipes are equipped with many outstanding features that assures long term system performance at lower maintenance cost.

FEATURES

- High reliability and proven service performance
- Excellent chemical and corrosion resistance
- Excellent flow characteristics
- High impact strength
- Long service life
- It can be jointed by Butt / Electro / Socket Fusion Compression / Flanged / Coupling Joint

Sizes	Length
20 to 50 mm	In Coil of 100, 200, 500 &1000 meter
63 to 75 mm	In Coil of 100, 200 & 300 meter
90 to 110 mm	In Coil of 50, 100 meter In Straight Length of 6 to 12 meter
125 to 630 mm	Straight Length 6 to 12 meter

	Applications												
Water Supply	Industrial	Environmental Protection	Agriculture	Other									
Transportation and Distribution system (Gravity & Pressure System)	Disposal of effluents, chemicals and treated / untreated water	Underground drainage and sewerage application / rehabilitation of existing sewers.	Column piping for submersible and jet pumps.	Transportation of chemicals, solids, gas and oils.									
House service connection for municipal water bodies and SEZ layout's.	As hydro transport system for handling and conveyance of iron, coal and cement slurry in mines.	Effluent and waste treatment Plants.	Suction and Delivery Pipes.	Underwater pipelines / desalination plants.									
	For conveyance of edible oil fruit pulps, juice, milks and other liquid food materials.	Dust suppression piping system in cement industry.	Sprinkler irrigation system										
	As a ventilation and air conditioning duct	Sand slurry disposal pipes in dredging.	Lift irrigation										
		De-gassing pipes in water effluent marine ourtfalls.	Insecticide spraying										

HDPE FITTINGS

We supply complete range of HDPE Fittings like Blind Flange, Slipon Flange, Flange with all Standards required by clients (i.e. D Table, F Table, E Table, ASA 150# etc), Stub End, Short Neck Pipe end, Long Neck Pipe End, Tail Piece, Equal Tee, Elbow / Bend.

HDPE PIPES FOR SEWERAGE

CONFORMING TO IS 14333

To fulfill the various requirements of drainage, sewerage and industrial sector. These pipes are suitable for gravity and pressurized applications. PE pipes are considered to be the most useful for undulating terrains.

- High reliability and proven service performance
- High impact and abrasion resistance
- Superior hydrostatic strength and excellent flow characteristics
- Excellent chemical and corrosion resistance
- Easy, quick and economical installation
- Outstanding flexibility and crush resistance
- Excellent weld-ability Butt welded joining provides leakfree monolithic pipe systems
- Does not support microbial growth
- Excellent water hammer resistance
- Deal in shifting soil condition and earthquake prone areas
- UV Stabilized Provides protection from ultra violet Sunrays which makes it suitable for exposed application.

HDPE SPRINKLER PIPES & FITTINGS FOR IRRIGATION

CONFORMING TO IS 14151 (PART-1) & 14151 (PART-2)

With increasing demand of food grains and field crops and with lower availability of water, a sprinkler system is used now a days for a much efficient use of water for irrigation. This primarily is a system of spraying of water through nozzles (sprinklers). Keeping in step with technology and the market demand, we offer quality HDPE quick coupled pipes, fittings and accessories for sprinkler irrigation. This system can be used in even in undulating fields with excellent results and is useful for almost all types of soils and crops. The system, while helping in reducing the requirement of water for irrigation, effectively prevents soil erosion.

FEATURES

- More than 40% water saving in comparison to flood irrigation.
- Well suited for irrigation of undulating fieldslevelling of land is not required.
- Portable, light weight and easy to handle.
- Extensive saving in transportation and labor cost.
- Easy and quick installation by using coupler type joint provided with pipes and fittings.
- Excellent corrosion resistant properties.

- UV Stabilized Provides protection from ultra violet sun rays which makes it suitable for exposed application.
- Highly flexible, crack and impact proof sustains high pressures and high temperatures.
- Chemically inert Makes it suitable for liquid fertilizers and pesticides.
- Strong, durable and long lasting.
- Cost effective.

APPLICATIONS

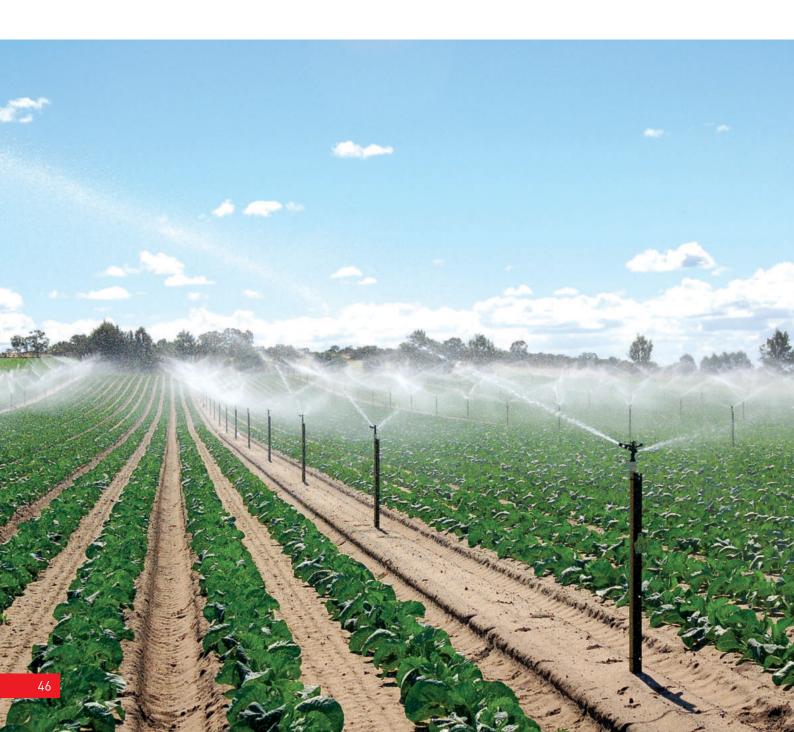

Suitable for almost all crops like wheat, gram, pulses, vegetables, cotton, tea, coffee and field crops like hay, corn and soybean. It is also suitable for gardens maintained in residences, industries, hotels, resorts, public and government premises as also large green patches like the golf and race courses.

PERMANENTLY LUBRICATED (PLB) HDPE DUCT FOR USE AS UNDER GROUND OPTICAL FIBRE CABLE CONDUIT

AS PER TEC & RDSO SPECIFICATION

The Permanently-Lubricated HDPE Telecom Duct consists of two concentric layers, the outer layer being HDPE; co-extruded with an inner layer of solid permanently lubricant which is distributed uniformly along the entire inner surface of the duct to drastically reduce the Internal Co-efficient of Friction (ICF). These Telecom Ducts with smooth inner surface facilitate easy insertion of Cable manually or by blowing technique and provide total protection to optical fiber cable, co-axial cables and electric power cable during and after installation. The Optical Fibre Cables used for Telecommunications being very delicate and sensitive, it became necessary to modify the HDPE Pipes to be used as conduits for optical fibre cables. This led to the development of Permanently Lubricated (PLB) HDPE Telecom Ducts.

The ducts are made in 8 colors such as Green, Orange, Blue, Yellow, Brown, Violet, Grey and Red.

	32 (MM) /26 (MM)	40 (MM) / 33 (MM)	50 (MM) /42 (MM)	63 (MM) / 50 (MM)	110 (MM) /80 (MM)

Maximum outer dia-meter of cable that can be installed by blowing technique.	12 mm	16 mm	21 mm	25 mm (144 fibres	40 mm (576 Fibres)

- Ducts being very light in weight hence offer low transportation costs and easy handling.
- Longer and easier cable installation reducing the cost of attachments.
- Saving of manpower.
- Reduced co- efficient of friction.
- Overcoming difficult field and extreme environmental conditions.
- it can be delivered in continuous length.
- Cost effective repairs and upgrading.

POLYETHYLENE PIPES FOR THE SUPPLY OF GASEOUS FUELS

CONFORMING TO IS 14885

MDPE pipe is an excellent choice due its proven track record of providing longevity and reliability in gas piping systems.

Traditionally these pipes are identified by its color for different uses like blue for water, orange for petrol, and yellow for gas lines. Due to inherent characteristics of MDPE (GAS PIPE) such as corrosion, resistance, flexibility, crack resistance and toughness, MDPE (GAS PIPE) pipes are used widely in the gas distribution system.

- Specification conforming to IS-14885 & ISO 4437 SDR17.6, 13.6, 11 & 9.
- Manufactured from virgin high performing special grade raw material PE-80 & PE-100.
- Minimum required strength (MRS) of 8 MPa & 10 MPa.
- Suitable for working pressure up to 7.0 bar.
- 50, 100 and 150m coils up to size 110mm.
- 6m length on all sizes above 110mm.
- High resistance to chemical reaction.
- Easy handling and jointing leading to reduced cost.
- Outstanding ability to withstand Rapid Crack propagation (RCP).
- High resistance to Crack Growth.
- Very high abrasion resistances.

POLYPROPYLENE (PPR) PIPES FOR THE SUPPLY OF HOT AND COLD WATER

CONFORMING TO IS 15801

PPR pipes and fittings are manufactured using Polypropylene Random Copolymer (PP-RC), which is the most reliable polymer in the piping system industry. The superior physical characteristics of PPR Pipes such as having a working temperature from -20° C to 95°C, along with excellent chemical resistance, providing a definite solution to oxidation and calcification, make PPR Piping Systems ideal primarily for chemical transportation, in pharmaceutical companies and for other industrial use, as well as, hot & cold water plumbing systems in buildings and industrial piping.

FEATURES

- UV-stabilized outer layer, PP-RC middle layer, Anti-microbial inner layer.
- PPR Pipes and fittings are non-corrosive, leakproof and frost proof.
- PPR Piping Systems can endure high impact and pressure, which minimizes structural damages like a diametric contraction.
- PPR Piping System can easily last up to 50 years without any servicing requirements.
- PPR Pipes have a smooth inner surface, thus, reducing the operational pressure required by the motor pump.
- PPR is resistant to high temperatures; up to 95°C.
- PPR piping systems are heat preserving and energy saving.
- PPR and Fittings have a smooth inner surface and are scale-free, hence, odor-free.
- PP-RC material can work in both acidic and basic solutions; hence shows no reaction with salts and acids.
- Its UV stabilized, which prevents the sun rays to degrade or destruct the material resulting in long operational life.

APPLICATION

- Piping system for the transportation of aggressive fluids in industries
- Pharmaceuticals
- The compressed air supply system
- Transportation of drinking water and liquid food
- Indoor as well as outdoor hot & cold water piping system
- Solar water heating systems
- The heating system inside buildings including floor, wall, and radiator heating

Pipe Size: 20mm to 160 mm

Pressure Ratings: PN 10 kg/cm², PN 12.5 kg/cm², PN 16 kg/cm², PN 20 kg/cm².

Range of PPR Fittings: Flange (Step Flange, Long Neck Flange), Long Neck Collar, Elbow 90°, Elbow 45°, Male Threaded Elbow, Female Threaded Elbow, Tee, Reducing Tee, Male Threaded Tee, Female Threaded Tee, Coupler, Male Threaded Adaptor, Female Threaded Adaptor, Reducer, End Cap, Union, Four Way Tee etc.

PVC PIPES & FITTINGS

upvc pipe for potable water supply

CONFORMING TO IS 4985

VPL offers an exhaustive range of uPVC pressure pipes and fittings. Pressure pipes are manufactured as per IS:4985-2000 standards and are available in 20 to 400mm sizes in different pressure classes. Pipes with both types of joints, i.e. Solvent cement type and rubber seal type are available. Moulded fittings are manufactured as per IS:7834 and fabricated fittings are manufactured as per IS:10124 and company standards.

These pipes and fittings are used for a variety of applications like, irrigation, water supply, industrial process lines, swimming pools, firefighting mains, etc. These pipes are superior to CI, DI or RCC pipes in terms of being light in weight, easier and quicker installation, excellent corrosion and chemical resistance properties, high flow rates, long life and economy.

- Odorless and hygienic These pipes are an excellent choice for carrying potable water as they do not allow contamination.
- High corrosion resistance Being immune to chemical, electrolytic and galvanic action, these pipes are free from corrosion which ensures a much longer and useful life.
- High chemical resistance Pipes offer excellent resistance to acids, oxidizing agents, alkalis, oils and domestic effluents.
- Smooth bore Pipes have a mirror smooth inside surface offering much better flow characteristics in comparison to AC, Cl and Gl pipes.

- Self extinguishing quality This feature eliminates the need for fire resistant coatings.
- Maintenance free Corrosion resistant property of the PVC pipes eliminates the need for repeated painting or coating like in the case of GI pipes.
- Long lasting As these pipes are free from weaknesses caused by scale formation, rusting, weathering and chemical action, they have a much longer effective life.
- Economical Despite being superior to conventional pipes, PVC pipes are very light in weight and last much longer than older piping systems offering a great economy in handling, transportation, installation and replacement.

uPVC SCREEN & CASING PIPES FOR BORE / TUBEWELL

CONFORMING TO IS12818

VPL offers variety of casing pipes along with the required accessories to complete the bore well system requirements in all respect. Manufactured using latest material and technology, these pipes are completely free from the problems associated with the conventional metal pipes. These pipes are rigorously tested to suit the specific application requirements. These casing pipes offers superior performance at a lower cost which makes them the preferred choice of the quality conscious customers across the country.

FEATURES

Excellent corrosion resistant - Unlike metal pipes, uPVC casing pipes are completely immune to corrosion and offer good resistance to aggressive elements in the soil which could cause encrustation of well screens.

Quick and convenient installation- These pipes can be easily assembled and installed using threaded joints. These pipes are suitable where drilling is done by hand, with light weight drilling rig or even with large capacity drilling machines.

Excellent strength and stiffness - These pipes have excellent stiffness and meet all the mechanical properties as per IS:12818. They have excellent hydrostatic collapse pressure that is capable of withstanding the external hydraulic pressure which these pipes would be subjected to during construction of the well.

Non-toxic - The material of the pipe is non-toxic and hence

does not impart any taste, odour or colour to water. It also does not release any harmful substance in the water which could pose health problems. It also resists bacteria, making it completely safe for drinking water.

Non-conductive - uPVC is a non-conductor of electricity eliminating any electro chemical reaction with ground water which could cause encrustation of screens.

Long lasting – As the material is free from rusting, weathering and chemical reactions and with excellent mechanical properties, Supreme casing pipes last a lifetime.

Economical - Apart from all the advantages listed above, uPVC casing pipes and screens are the most economical bore-well solution as compared to other materials or even alternative uPVC casing pipes available in the market.

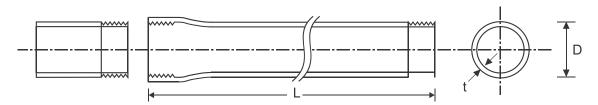

PVC PIPE

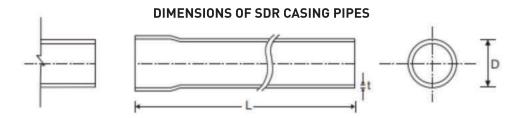

These pipes are manufactured as per BIS standards (IS 12818) and are available in deep blue colour. One end of the pipe is male threaded where as other end is a female threaded socket.

Threads are either 'V' type or trapezoid type and protection caps are provided on the threads to protect the threads in transit. Two types of pipes viz. Shallow Well (C.S.) and Medium Well (C.M.) are available. Shallow well pipes can be used for depths up to 80 m and medium well pipes can be used up to 250 m of depth.

DIMENSIONS OF CASING PIPES

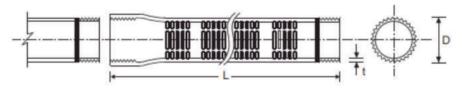

These economical pipes, manufactured as per company standards and are suitable for shallow depths where soil formation is favorable. Use of these pipes for a particular application needs to be examined on case to case basis. One end of the pipe is plain where as other end is socketed for solvent weld joint. These pipes are available in blue colour.

These pipes are provided with 'V' shape ribs on its exterior surface. The special design of this structure with fine slots provided on the pipes, prevent entry of even small particles and hence permeability of the screen is maintained. These pipes are generally used in combined wells or used for specific formation where normal screen pipes do not work e.g. fine sand. These pipes are provided with male and female threaded ends.

SCREEN / SLOTTED PIPES FOR CASING

Screen or slotted pipes are used for casing in ground water section to allow water to enter inside the well. These pipes can also be used to provide soak-ways for the storm water/rain water to infiltrate it back into surrounding areas. Thus we can recharge the ground water and prevent run off of rain water. These percolation pipes can also used in roof top rain water harvesting in the form of percolation pit, to recharge the ground water. These pipes can also be used for controlled and reduced volume of discharge of rain water into existing main sewer systems and water courses.

uPVC THREADED PIPES

As per ASTM D-1785

These pipes are manufactured as per ASTM D 1785 standard in Schedule 40, Schedule 80& Schedule 120 pressure class. It can be used for an array of applications, including: Hot and cold-water distribution in residential, commercial and industrial spaces. Carrying portable water and edible fluids Transportation of chemicals and other hot, corrosive fluids Solar heating, central heating and radiant floor heating applications.

These pipes are manufactured with two different jointing methods: Threaded joints & Solvent Cement Joints

- Stronger, resilient and longer lasting
- Excellent corrosion and chemical resistance
- Light weight, easy and fast installation
- Hygienic and safe for carrying drinking water
- Optimum flow rates
- Unaffected by termites, fungus or bacteria
- No algae formation
- 100% Leak proof joints
- No root penetration
- No galvanic action with CP and other fittings
- Bad conductor of electricity

uPVC COLUMN PIPES

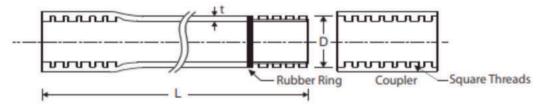

Column Pipes are manufactured with latest plant and machinery with the High-gradePVC resin with various other imported chemicals to sustain high tensile loads subjected on it by the weight of the Submersible Pump-set and vibration generated by it while running. These pipes have heavy duty square threads along with a permanently joint separate socket attached to one end of the pipe. To ensure leak proof joints high quality EPDM rubber rings are provided on both ends of the pipes and inside the socket as well.

Available in various sizes starting from 25 mm to 150 mm diameter in various categories, thick and thin technology to ensure uniform thickness across the length of the pipe and the square threads for extra strength, are some of the unique features of VPL Column Pipes.

FEATURES

- Column pipes offer many advantages like light in weight, high tensile load capacity, leak proof joints and long life making them very economical.
- Special compound Manufactured from especially designed uPVC compound to make it sufficiently strong against loads and pressure that it may encounter during installation and use.
- Square threads Unique square thread design makes the joints fairly strong with sufficient safety factor to take care of load of entire assembly along with weight of the pump. These specially designed threads also make them suitable for easy joining and re-joining several times.
- Sealing ring Specially designed D type and flat rubber sealing rings provided on the threads make the joints watertight and help absorb pump vibrations

uPVC PIPES FOR USE IN UNDERGROUND DRAINAGE & SEWERAGE SYSTEM

CONFORMING TO IS 15328

VPL offers economical, high performance drainage systems to meet the demanding needs of today's drain and sewer market. Like all our other products, they are cost effective, strong and resistant to impact and are easy to install. There is a range of drainage accessories designed to meet the needs of the most stringent building regulations. Their overall-flexibility ensures that VPL can supply all domestic and commercial requirements for foul water and surface water drainage, up to and including the main sewers.

Solid wall pipe and fittings, predominately used for private drainage but suitable for public and private sewers. Also available with rubber joint leak proof systems.

These pipes are self socketed at one end & plain at other end. Sockets are made on automatic socketing machine with accuracy. Socket has groove inside to retain rubber ring. The rubber ring joint ensures trouble free water tight joint with allowance to expansion / contraction.

FEATURES

- Specially designed for underground non-pressure applications
- Easy to install
- Hygienic and leak proof
- Smooth inner bore for better flow rate of water
- Lower installation & maintenance cost as compared to conventional pipes
- Excellent stiffness and impact resistance
- Easy of jointing when using uPVC joints & fittings

APPLICATIONS

- Specially Recommended for Underground Drainage
- Sewerage Systems.
- Industrial/Chemical Effluent Conveyance.
- Lining of Existing Sewerage lines.
- Storm Water Drainage.
- Acid and slurries transportation.

UPVC PIPES FOR SOIL AND WASTE DISCHARGE SYSTEM INSIDE BUILDINGS INCLUDING VENTILATION AND RAINWATER SYSTEM

CONFORMING TO IS 13592

uPVC SWR Drainage System is an easy & economical product for drainage of soil waste & rain water application in residential, commercial & industrial buildings with many advantages over the conventional piping systems.

SWR systems include solvent-weld and push-fit options for both soil, waste and rain water drainage: a comprehensive range of products and accessories. Industry leading and world class range of solvent and push-fit soil and waste solutions offer unrivalled installation options, high quality finish, superior technology and are suitable for all types of commercial and domestic installations.

- High quality and wide range -The system consists of pipes and a wide range of fittings with various traps, which makes the system complete in all respect and hence customer need not to depend on conventional systems.
- Strong and long lasting This system is highly resilient, though and durable with high tensile strength and high impact strength. Moreover it is free from problems caused by scale formation, rusting, weathering and chemical action and hence it lasts for lifetime.
- Excellent chemical and corrosion resistance Being non-metallic, this system is completely free from corrosion and offers very good resistance to wide range of chemicals.
- UV resistance It eliminates the adverse effect of sunlight and weather and can safely used for outdoor installations.
- Quick and convenient installation Being extremely light in weight and provided with special rubber jointing technique, installation of this system becomes very easy.
- Quick and efficient removal of waste without leakage Mirror smooth and restriction free inner surface of pipes and fittings ensures superior flow characteristics making the system is free from problems of clogging and drain choke-up. System is completely leak-proof and designed to maintain high standards of hygiene.
- Adequate and easy access for cleaning and clearing obstructions.
- Least maintenance Once installed VPL S.W.R. drainage system needs minimal maintenance.
- Cost effective VPL S.W.R. drainage system is more cost effective than any conventional drainage system.

RIGID PVC CONDUIT FOR ELECTRICAL INSTALLATIONS

CONFORMING TO IS 9537 (Part-3)

An electrical conduit is a tubing system used for protection and routing of electrical wiring. PVC conduit is the lightest in weight compared to other conduit materials, and usually lower in cost than other forms of conduit such as Steel and G. I. Conduits.

- Non conductor of electricity.
- High mechanical strength in concealed and open conditions.
- Smooth finished inner surface ensures friction free & easy wiring.
- Corrosion free and resistant to bacterial, termite and fungal growth.
- Moisture-resistant and flame retardant.
- Due to light weight easy to handle, install & transport.
- Economical, durable & maintenance free.
- Easy to replace.
- No deformation or bending.
- No cracking.
- Nontoxic.

cPVC PIPES FOR POTABLE HOT AND COLD WATER DISTRIBUTION

CONFORMING TO IS 15778

cPVC sets a tough new standard for performance in hot and cold water plumbing systems. With an advanced, new chemical formula, CPVC solves many of the problems of both copper and conventional CPVC, while delivering exceptional value.

FEATURES

CPVC is resistant to low-pH water, coastal salt air or corrosive soil. It also offers several other outstanding benefits:

- Economical than traditional pipe material.
- Full, unrestricted water flow.
- Extremely cost-effective pricing.

- Cement fusing.
- Excellent heat retention.
- Very quiet operation.

STEEL PIPES & TUBES

STEEL PIPES & TUBE

ERW pipes & tubes are made from HR coils manufactured by reputed steel producer. After being longitudinally slitted & edge preparation, the strip is progressively formed into a circular, rectangular, square shape by passing it through a series of forming rolls.

Continuous welding is carried out by a high frequency induction welding machine, and the seam is formed by fusing the edges without any filler metal. The welded pie, after cooling is cut in appropriate length after attaining its specified inside and outside diameter.

The pipes & tubes are conveyed to the finishing bay for finishing, testing & inspection. Hydro testing of pipes is undertaken to detect leaks and fissures prior to galvanizing and threading. The pipes are subsequently galvanized / black varnished / threaded / painted / powder coated as per specification / client requirement.

ERW pipes & tubes are extensively used in agriculture, industry, construction activities like scaffolding and casing in bore wells. Rectangular and square hollow sections are used for structural purpose considering the challenging and varied applications the pipes are produced to meet national and international specification.

STEEL PIPES & TUBE

THIN WALLED FLEXIBLE QUICK COUPLING PIPES

CONFORMING TO IS 11722

These pipes are versatile, economical and reliable piping system available. It is easier, faster and safer to install than normal welding, threading or flanging pipes resulting in lower installation and labor costs.

These pipes are intended for water supply where transportation and quick assembly of pipes are the main requisite.

APPLICATIONS

- Irrigation including sprinkler irrigation
- Construction site water supply in civil engineering and construction projects, compressed air pipelines and networks at construction sites.
- Temporary on emergency water service
- Suction lines (Tube wells)
- De-watering in flood relief operations

- Dust suppression through sprinkling in mining, ore handling, etc.
- Wellpoint de-watering networks
- Aeration in fish farming
- Fire preventing and fighting (Coal, yard/pits, timber yard/raw material stock yards for paper mills)

STEEL TUBES FOR STRUCTURAL PURPOSES

STEEL HOLLOW SECTION (SHS & RHS)

CONFORMING TO IS 4923

Closed Structural (RHS / SHS) manufactured our company has several techno economic advantages over Conventional Structural.

- The raw material used to make these structural comes from reputed steel producer.
- The remarkable strength around their axis which leads to decisive advantages with regards to application technology.
- Closed Structural's behave move efficiently than Conventional Structural's due to their high torsional rigidity as well compressive strength.
- Their higher strength to weight ratio results in upto 30 to 40% saving in steel.
- The smooth, uniform profile of these sections minimize corrosion and facilitate easy, at-site fabrication.
- They also enhance the aesthetic appeal of structures.

APPLICATION

- Agricultural Implement Frames
- Amusement Park and Playground Equipments
- Automobile Chassis
- Bridges
- Bus Stands
- Conveyor Gantries, Trestles Cranes
- Drilling Rags
- Exhibition Stalls
- Furniture, Partition Frames
- Flood Light Masts
- Guard Rails, Staircases
- Industrial Lifting Equipment
- Industrial Sheds

- Large Span Portal Frames Material Storage
- Racks
- Mine Roof Support System (cogs, props)
- Pallets
- Pedestrian Walkovers (Footbridge)
- Sign Supporting Structure
- Space Frames
- Sports Galleries
- Transmission Line Towers
- Trolleys
- Truck and Bus Body Members
- Trusses, Columns and Purlings
- And lots of other applications....

RIGID STEEL CONDUIT & ACCESSORIES

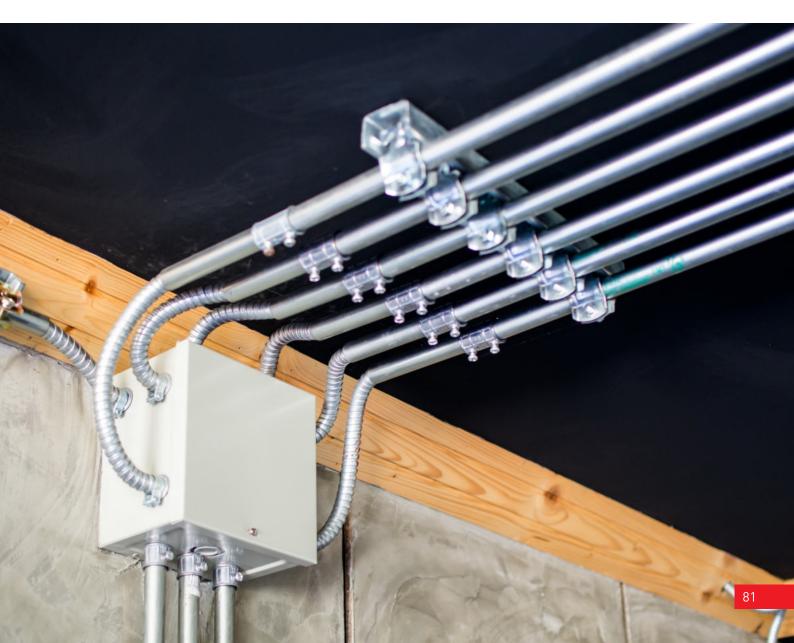

RIGID STEEL CONDUIT FOR ELECTRICAL INSTALLATIONS

CONFORMING TO IS 9537 (Part-2)

Black stove enameled Steel Conduit Pipes and Galvanized Steel Conduit Pipes have high corrosion resistance and considered non-combustible.

These rigid steel conduit can be used indoors, outdoors, underground, concealed or exposed, for future wiring changes and provide excellent mechanical protection to conductors & cables.

DIMENSIONS							
Nominal Size of Conduit (MM)	Outside Diameter (MM)	Tolerance in Outside Diameter (MM)	Thickness (MM)				
20	20	-0.3	1.4 to 1.8				
25	25	-0.4	1.4 to 1.8				
32	32	-0.4	1.4 to 1.8				
40	40	-0.4	1.6 to 2.2				
50	50	-0.5	1.6 to 2.2				

STEEL TUBES FOR CITY GAS DISTRIBUTION

CONFORMING TO IS: 1239 & IS: 13871

Galvanized Iron (GI) pipes are used in above ground service lines up to consumer meter or meter control valve. GI Pipes are used for transportation of Piped Natural Gas in households.

Sizes: NB 15 mm, NB 20 mm, NB 25 mm

Supplied as:

- a) Galvanised Pipe
- b) Galvanised & Powder Coated pipes

Approved by:

- Indraprastha Gas Ltd.
- Adani Gas Ltd.
- Maharashtra Natural Gas Ltd
- GAIL Gas Ltd.
- Bhagyanagar Gas Ltd.
- Avantika Gas Ltd.
- Assam Gas Ltd.
- Godavari Gas Ltd.
- Green Gas Ltd.
- Gujarat Gas Limited

LED LIGHTS

LED LIGHT _____

BR Green Industries Pvt Ltd. (formerly Axiom Exim Pvt Ltd.), a manufacturing company of "VPL Group" under the brand name "VPL India LED" which deals in energy efficient lighting products for domestic, industrial and commercial use.

The corporate office and manufacturing unit is situated at Bawana industrial area in New Delhi.

Website: www.brgreen.in, Email: info@brgreen.in
